Nashville Airport Response

UPDATE #5: Nashville Airport Response – April 11, 2019, 4:35 p.m. Central Time

Colonial Pipeline has completed repairs and has safely restarted Line 19. Line 19 transports gasoline from Atlanta, Ga., to Nashville, Tenn.

On Tuesday afternoon, April 9, Colonial Pipeline responded to a product release and a report that a third party contractor had struck a pipeline while completing work at the Nashville International Airport (BNA). Lines 19 and 20 were immediately shut down as a precautionary measure, and responders were dispatched to the area. Colonial Pipeline confirmed Line 20, which transports distillate fuels, was not impacted, and service was restored to Line 20 at approximately 10:25 p.m. Central Time on Tuesday, April 9.

Colonial Pipeline is the largest refined products pipeline system in the United States delivering more than 100 million gallons of fuel each day to more than 50 million Americans in the Southern and Eastern U.S. Colonial is committed to operating its pipeline system safely, reliably and efficiently.

The following summarizes key response activities at this time:

- The safety of workers, responders and the public – as well as environmental protection – is the top priority. Safety is the foundation of our business.
- Repair activities to Line 19 were completed at approximately 5:10 a.m. Central Time today, Thursday, April 11. Service was restored to Line 19 early this afternoon.
- Colonial Pipeline workers will continue to have a presence onsite in the coming days to monitor conditions onsite and start property restoration efforts. The safety of local residents, as well as the safety of workers remains the top priority.
- As part of continuous monitoring and recovery efforts, a product sheen was detected in McCrory Creek on Nashville International Airport property this morning. Containment and recovery efforts are in progress on airport property.
- In a proactive effort, Colonial Pipeline is placing additional boom in strategic locations along McCrory Creek North of I-40. The company continues to work with our environmental partners, including the Tennessee Department of Environment and Conservation (TDEC) and the federal Environmental Protection Agency (EPA) Region IV.
- Colonial Pipeline greatly appreciates the efforts of its response partners in the effective management of this event, including our environmental partners – TDEC and EPA Region IV -- and the Metropolitan Nashville Airport Authority's Department of Public Safety.
- Any future updates will be posted to the Colonial website at <https://nashvilleairport.colonialresponse.com> as needed.
- Media are advised to contact Colonial Pipeline at colonialmedia@colpipe.com or 1-888-840-0213.

About Colonial Pipeline: Colonial Pipeline Company, founded in 1962, connects refineries – primarily located in the Gulf Coast – with customers and markets throughout the Southern and Eastern United States. The company delivers refined petroleum products such as gasoline, diesel, jet fuel, home heating oil, and fuel for the U.S. Military. Colonial is committed to safety and environmental stewardship across its operations. More information about Colonial is available at www.colpipe.com.
